Table 1

Location and characteristics of the eight nature reserves under study in Belgium. Four reserves already had an existing artificial shelter installed by the reserve manager; in the remaining reserves we placed artificial shelter five to eight months before the start of the experiment. In one reserve, one artificial shelter (A) was installed by the reserve manager and another (B) was installed by us.

	total area (ha)	vegetation or landscape type	% natural shelter	artificial shelter					max. n ^o cattle	cattle breed	sex and age ³ of GPS cow	H	S	
				recently installed?	orientation open side	roof material	roof insulated?	roof height						area (m ²)
